

This poster was created keeping in mind a futuristic underwater city with giant robots, cars and glowing coral. The lines in the artwork are used to guide the viewer's eye through. Tall vertical skyscrapers make the city appear futuristic, while the diagonal beam creates movement guiding attention to the robotic center.

The part that stands out most is the glowing center along with the giant metallic robots. These parts stand out because the bright coral creates a contrast with the blue background. This area was kept as the main focus as it represents the heart of the underwater city and catches attention.

Copilot created accordingly to what my prompt was, but there were some minor details, that were different from what I exactly imagined. Some underwater vehicle ~~and~~, parts of the city looked, and the robot's appearance was slightly different from what I had pictured, although I really liked the final result.

After the prompt was revised the second poster had different contrasting lighting, slightly varied robot appearance from before and more detail in the background. The underwater city now looked more futuristic and the poster matched the original idea better. This taught me that certain small changes in the prompt can improve the final outcome.
